- Multiple Sclerosis (MS)
- Myasthenia Gravis
- Cleft Palate
- Autism Spectrum Disorder (ASD)
- Sensory Processing Disorder
- Pediatric Speech/Language Delays
- COPD
- GERD
- Esophageal Stricture
- Encephalopathy
- Vocal Cord Dysfunction
- Dyslexia

## DID YOU KNOW?

A speech therapist is capable of conducting a modified barium swallow study, commonly referred to as a video swallow study. This study involves an X-ray examination carried out in the radiology suite, with the presence of a radiologist. It aims to assess a patient's chewing and swallowing abilities, providing valuable insights into their overall swallowing function.

*Research suggests the sooner you get therapy, the better the outcome!*
